Detailed Workshop Program

Day 1: June 2nd, 2022

08:15 AM – 8:45 AM: Reception

08:45 AM -09:00 AM Workshop Welcome by the Co-chairs (Room Yvonne Foinant):

Prof. **Gilles Dufrénot** (Aix-Marseille School of Economics, France) and Prof. **Fredj Jawadi** (University of Lille, France)

09:00 AM – 10:00 AM Plenary Session 1 Room Yvonne Foinant

Keynote Speaker 1: Prof. Esfandiar Maasoumi (Emory University, the USA)

Moderator: Prof. Fredj Jawadi (University of Lille, France)

Keynote Speaker 1: Prof. Esfandiar Maasoumi (Emory University, the USA)

Esfandiar Maasoumi is a leading international econometrician. He has been the Editor and managing editor of *Econometric Reviews* since 1987. ER is one of the top 5 core journals in Econometrics with one of the most distinguished Editorial Boards in economics. Maasoumi is a *Fellow of the Royal Society*, a *Fellow of the American Statistical Association*, Founding Fellow of International Association for Applied Econometrics (IAAE), *Fellow of Society for Economic Measurement*, and several others. He earned a *Fellow of Journal of Econometrics* since 1989 for the high frequency of his publications. Maasoumi is the Arts & Sciences Distinguished Professor of Economics at Emory University, and has served at the London School of Economics, USC, Indiana, SMU, and has been a visitor at MIT, Yale, University of California (several campuses), and many other internationally ranked institutions overseas. He has B.SC, M.SC and Ph.D degrees in Mathematical Economics, Statistics, and Econometrics (respectively) from the London School of Economics, University of London.

Maasoumi has published more than 100 papers in the leading journals in economics, and numerous edited books and special issues on a wide range of topics in econometrics and economics. His publications have appeared in *Econometrica*, *J. of Econometrics*, *Journal of Political Economy*, *Review of Econ and Stats*, *Review of Economic Studies*, *American Economic Review*, *Journal of Business and Economic Statistics*, *Journal of applied Econometric*, *Biometrika*, among others. He is consistently ranked in the top 50 of the “Econometrics Hall of Fame”.

Maasoumi is considered by some as the intellectual leader of the Empirical/Statistical “Income Inequality” literature, with influential works on multidimensional well-being, mobility, and poverty. His measures of aggregation and inequality in many dimensions are leaders in the field, as is his leading work on stochastic dominance with Oliver Linton and others. He has also been a known leader and innovator in the field of Information Theory, where he is regarded as one of the most creative researchers in conceptualization of econometric and economic objects with information theory criteria and techniques first developed in communication theory.

His areas of research and interest range widely. They include nonlinear time series models and methods, Information Theory, Aggregation, Econometric tests and estimators, finite sample distribution theory, forecasting, empirical finance, Patent infringement methods, nonparametric methods, and the aforementioned areas of inequality, poverty, and mobility, especially in many dimensions. His work on program evaluation and policy analysis joins innovations in information theory, stochastic dominance testing, and treatment effect analysis.

Lecture: “Subset Selection in Portfolio Choice”

Abstract:

This paper proposes a novel portfolio strategy over individual stocks based on subset combination of a large number of characteristics documented to predict return. Akin to the forecast combination literature, we exploit all characteristics by combining parametric rules that include a particular subset of characteristics holding fixed the number of inclusion. The choice of subset dimension governs the shrinkage of estimated parametric rule that includes all characteristics, and trades off the efficiency and robustness of portfolio decision. Empirical application to US individual stocks using 92 characteristics shows that subset combination strategy achieves desirable return properties. It outperforms characteristics-sparse strategies based on machine learning and alternative strategies based on principal component analysis. The subset combination strategy is adapted to both mean-variance and CRRA utility and its portfolio value remains in the presence of transaction costs and post-publication decay of anomalies.

Lecture: “Local Projections in Unstable Environments: How Effective is Fiscal Policy?”

Abstract:

This paper develops a local projection estimator for estimating impulse responses in the presence of time variation. Importantly, we allow local instabilities in both slope coefficients and variances. Monte Carlo simulations illustrate that the method performs well in practice. Using our proposed estimator, we shed new light on the effects of fiscal policy shocks and the size of government spending multipliers. Our analysis uncovers the existence of instabilities that were unaccounted for in previous studies, and links time variation in the multipliers to the size of government debt.

Lecture: “Principal Component Analysis for Nonstationary Series”

Abstract

This paper develops a procedure for uncovering the common cyclical factors that drive a mix of stationary and nonstationary variables. The method does not require knowing which variables are nonstationary or the nature of the nonstationarity. Applications to the term structure of interest rates and the FRED-MD Macroeconomic database demonstrate that the approach offers similar benefits to those of traditional principal component analysis with some added advantages.
